Email

Add   See Contact Inf   Delete Contact Info

This was my first test, Nothing worked I could enter names and everything but once I clicked add it was gone.

Francisco's Phone Book

Add   See Contact Inf   Delete Contact Info

John Smith

Help   Exit Program

Here the name would appear but the number address and email would not save so when clicking see contact information I would get an error.

Here I would type in John Smith's info and add and all of that was fine, then I would click Juan end enter his info and then that was fine, but once I clicked see info whoevers info i entered last that would be the info shown so If i entered Juan's and the clicked see contact info for John, Juan's would be shown and that would be the only info shown, and it was like that for all info entered.

Here is my final testings. In the first one I tested completely empty fields which worked and didn't mess up anything. In the last two I used 2 people and the add and see contact button worked to how I wanted it to.
